## Robot Competition Stage

Have you seen a robot competition, or manipulated a robot by yourself in a competition?

Maybe you have seen them in a science fiction film, so why don't you come and attend a live show of robot competition?

Maker Faire Taipei

## Smart Hardware | Makers x Business

What does the life in the future look like? Maybe, your mug will remind you of drinking water, porridge cooker will make a decent breakfast after you brush your teeth, tennis racket will tell you the serving speed and swinging power, your basket ball will record your shooting average, your phone will be able to unlock your home door, and your bicycle can lead your dog home. Innovation companies from home and abroad will take you into a kind of future life with their products.

## Workshop

The workshops will be lead by domestic and international makers and makers themselves will participate into the product-making procedure.

Everyone will experience the joy of getting involved into hand making activities.

It may take 2 hours to make a lighting dominoes, or 15 minutes to make a glowing brooch, or design a ring and deliver it to your girlfriend by a 3D printing machine.

The spirit of makers is to “walk the talk” and bring the ideas to action instead of keeping it in mind.

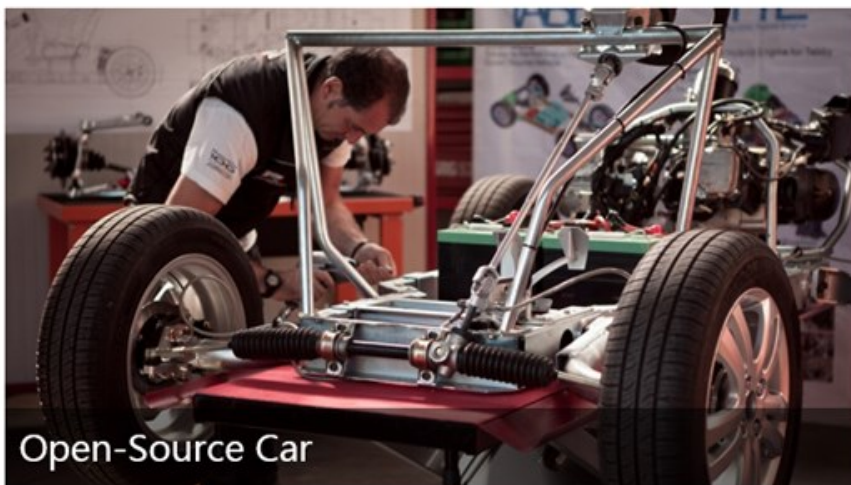

## Vehicles

What does the most unordinary car you've ever seen look like?

There are China owned hand soldering and hand made racing cars, off-road vehicles, scooters, concept cars, modified motorcycles, vintage bicycles and tricycles, as well as Lego-style self-designed and assembled cars.

Those cars may not be open to the public in the market, or not suitable to ride on road, but they will surprise you and you probably can get a chance to take a ride with it.
